

## Reliable Products for Extreme Environments

Marsh Industries is a modern, dependable source for precision extruded and molded rubber parts. Established in Nov. 1970, we are a leader in manufacturing Silicone Rubber Components. Our capabilities allow us to compete for Aerospace, Automotive, Commercial Aircraft, Appliance, and Military contracts.

At our Mt. Clemens facility, we occupy over 23,000 square feet of space with the most technologically advanced equipment devoted to the production of Silicone Rubber parts. These highly efficient facilities enable us to manufacture extremely durable products for many diverse applications. Our skilled engineering staff will be happy to assist you in designing a product that will meet your criteria for design, function,

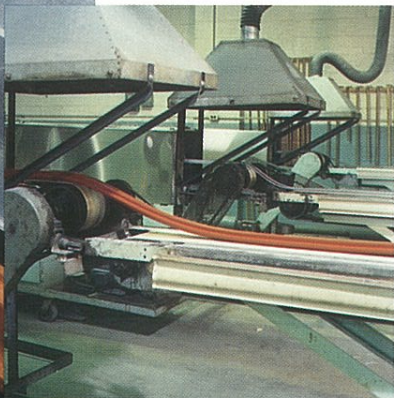

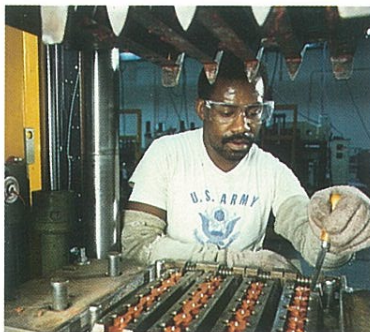

**Assembly**

**Extruded parts**

**Multiple extrusion lines**

**Computer controlled injection press**

**Vertical curing for concentric shapes**

**On line cutting capabilities for faster, cost saving production**

**Die cutting capabilities**

**Molded parts**

and price. Extensive in house mixing capabilities allows us flexibility in using a wide range of Heat Curable Silicone Rubber materials for your custom compound needs. Our manufacturing capabilities include molding, extruding, die cutting and our detailed production process enables us to review and check quality at any given point. An on premise physical testing laboratory also helps to assure that

products meet customer's quality requirements.

Whether it's short customized runs or high volume production runs, Marsh Industries understands and has what it takes to manufacture the highest quality Silicone Rubber Products within a surprisingly fast turnaround time.
